

Auditory EEG: first-pass estimates and uncertainty

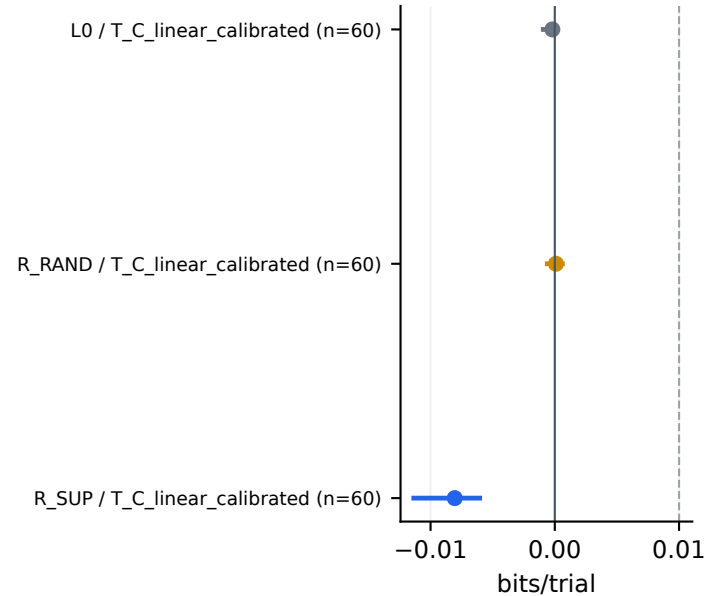

A: conditional-response repeatability

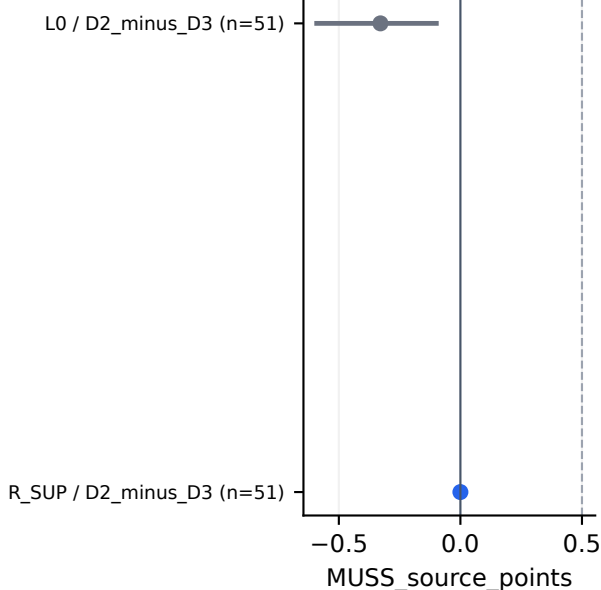

B: conditional history gain

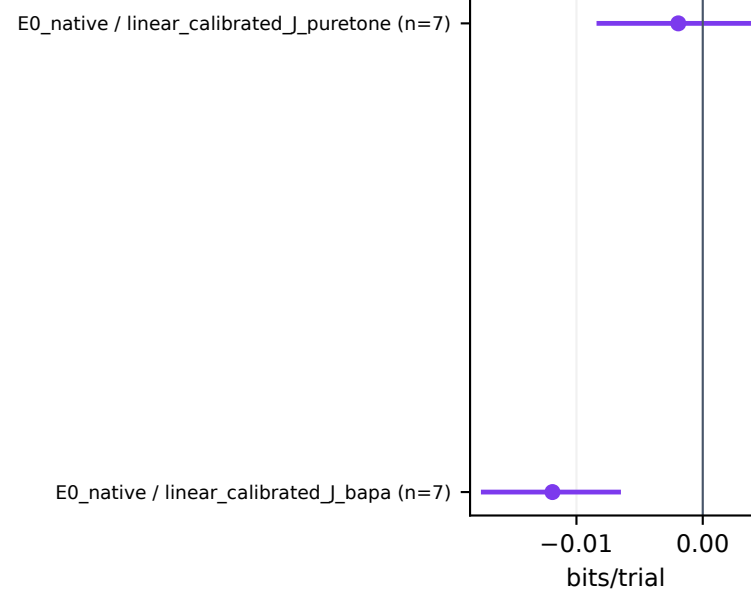

C: paired-sensor complementarity

D: clinical null-feature increment

E0: within-record decoding

Exploratory first pass

Points: frozen primary/readout estimates
Bars: 95% fixed-OOF candidate bootstrap
Dashed lines: resource-screening thresholds

Numerical failures are not zero effects.
C linear results cannot replace required MLP controls.
E0 is within-record, not held-out-child transfer.
These cohorts are not untouched confirmation data.
